

ThermoVaultX Series 4 and 8-Channel Thermocouple Data Loggers

Oven temperature profiling can help ensure that a quality product is consistently produced. Profiling enables users to optimize their process, prove process control and make corrections to a process when required. The ThermoVaultX Series is a thermally insulated, battery powered, oven temperature data logger able to withstand extreme temperatures. It can withstand oven temperatures of up to 662 °F for up to 25 minutes when properly sealed. Its stainless steel enclosure and thermal properties lend itself to be the ideal temperature recording device for applications such as powder coating cure ovens, wet coating cure ovens, batch ovens and conveyor ovens. The external thermocouple probes provide accurate temperature measurements, with fast response times.

Our user-friendly software easily downloads the data to a computer, where the readings may be displayed in degrees Celsius, degrees Fahrenheit, Kelvin or Rankine. The software allows the user to view all data points or a range of data points and a summary of the data being viewed for calculations such as Mean Kinetic Temperature (MKT). If additional analysis of the data needs to be performed, the data can be easily exported to Excel® by simply clicking a button.

Graph View

- Multiple graph overlay
- Statistics
- Digital calibration
- Zoom in/ zoom out
- Lethality equations (F0, PU)
- Mean Kinetic Temperature
- Full time zone support
- Data annotation
- Min./Max./Average lines
- Summary view

Features

- Programmable start time
- Reusable
- Convenient size
- User-friendly
- Ambient and thermocouple channels
- Automatic thermocouple linearization
- Type K thermocouples and power supply included

Applications

- Extreme temperature monitoring
- Oven profiling
- Powder coating cure ovens
- Wet coating cure ovens
- Batch ovens
- Conveyor ovens
- Implement HACCP programs

Disclaimer & Terms of Use

Listed specifications can be used to determine maximum allowable exposure times for the TCTempX with ThermoVaultX. The barrier extends the operating temperature of the logger up to 350 °C (662 °F).

Both the data logger and ThermoVaultX must be at ambient temperature, approximately 25 °C (77 °F) before being placed in the extreme temperature environment. Immediately following exposure to high temperature, the data logger should be removed from the ThermoVaultX, using appropriate precautions, as it could be VERY hot. Failing to remove the data logger may allow heat trapped in the ThermoVaultX to continue to heat the data logger to potentially unsafe levels.

The ThermoVaultX may take hours to fully cool down. Even if the exterior of the ThermoVaultX is cool to the touch, the interior of the barrier and its contents may still be VERY hot. Allow the entire system to cool down to approximately 25~°C (77 °F) before successive cycles.
